Stocks from Tatum Neurospora Collection

Abstract

Stocks from Tatum Neurospora Collection, compiled by R.W. Barratt, Director, FGSC, from existing information from the files of the late Dr. E.L. Tatum

Stocks from Tatum Neurospora Collection

The original Tatum collection including stocks produced at Stanford, Yale, Rockefeller Universities and Brookhaven by Val Woodward, has now been completely received and stocks or strains deemed of value, and not previously included in the FGSC collection, saved separately. All strains are in the original lyophil culture. Anyone wishing any of the stocks listed below should write to FGSC and specify the stock desired by genotype, isolation (allele) number, etc. The following information has been compiled by R.W. Barratt, Director, FGSC from existing information from the files of the late Dr. E.L. Tatum. The viability and genotype of any of the strains is not guaranteed by FGSC.

Group I

Beadle/Tatum original mutants, or closest to original available. Many have been relyophilized from original but not crossed and reisolated. All loci are represented in the current FGSC collection as reisolates from crosses to wild types. A/a under mating type indicates a strain is available in both mating types.

Locus	Allele	M.T.	Date Lyophi- lized	Notes
ad-2	27663	a	?	See FGSC 516 - backcross with SY4a of Caltech backcross (27663-1830-8A)
ad-4	44206	a	12-49	Presumably from Caltech (44206-3382-4a)
ad-5	71104	a	12-49	Original strain? Carries Caltech # (71104-5115-6a)
ad-6	28610	a	12-49	Carries Caltech #28610-C-930a. Probably an isolate from backcross to an unknown wild type.
ad-7	44411	a	12-49	Presumably F. Hungate reisolated of original see also FGSC 517
al-2	15300	A	2-47	Probably from first cross of original
al-2	15300	a	2-46	Original isolate
am	47305	A	6-50	Presumably original isolate. See also FGSC 519
amy	422	A	6-51	In heterokaryon (met-7;amy)+(arg-6)
arg-1	46004	a	8-53	Presumably original. See also FGSC 407
arg-1	T(I;V)36703	a	2-46	Probably original isolate
arg-4	34105	a	3-57	From Caltech collection via Mary Mitchell Not original (34105-R-3a)
arg-4;al-1	21502;4637	a	3-57	From Mary Mitchell, but not original strain
arg-5	27947	a	2-56	From Barratt, perhaps original isolate
arg-5	27947	a	3-56	May be original - this stock from Tatum to Barratt to Perkins to Tatum collection
arg-6	29997	a	12-53	Very leaky, due to suppressor or heterokaryons; probably original.
arg-11	30820	A	4-57	Not original; probably 3rd generation backcross
asco	37402	a	7-54	From Caltech via M. Mitchell -probably original.
chol-1	34486	a	4-49	Probably original, probably same as FGSC 485
chol-2	47904	a	12-49	Possibly original strain; carries Caltech # 47904-2893-7a)
cys-10	39816	a	11-58	Earliest strain available, pedigree unknown
dn	38502d	a	07-54	From Caltech via M. Mitchell (original?)
gld	70007g	A	1961	Reisolate of original
hom	51504	A	4-48	Presumably original
ile-1	46003	A	4-48	Presumably original
ilv(71103)	71103	A	11-46	Presumably original
inl	37401	A	7-51	Probably backcross to w.t. derivative in <u>A m.t.</u>
inl	37401	a	2-46	Probably original
inl	46316	a	?	See FGSC 2321
inl	64001	A	?	From Beadle to Catcheside to FGSC (see FGSC 658)

Locus	Allele	M.T.	Date Lyophi- lized	Notes
in1	T(V;VI)46802	a	1-48	Presumably original
iv-1	16117	A/a	2-49	Original isolate
iv-2	46807	A	11-46	Presumably original (see also FGSC 501)
leu-1;al-2	33757;15300	A	5-46	Earliest derivative available
lys-1	33933	a	1-51	From Caltech collection via M. Mitchell (33933-R-7a), not original
lys-2	37101	A	1-51	Designated 37101-N-1-A. Probably not original isolate.
lys-2	37101	a	12-49	Probably original
lys-4	15069	a	12-49	Probably from 1st cross of original. Carries Caltech no. 15069-H-5a
me-1	38706	a	3-56	Possibly original isolate
me-3	36104	a	10-49	Probably original isolate
me-5	9666	A/a	?	1st backcross of original (9666-1-2A; 9666-1-14a)
me-6	35809	a	12-49	Probably original
met-1	38706	A	1961	From Tatum to Barratt to Tatum Rockefeller collection - possibly original
met-7	37103	A	10-49	Presumably original
nit-1	34547	A	7-54	From Caltech via P. St. Lawrence, <u>not</u> original (33547-R1-A)
nt	65001	a	10-49	Presumably original strain
pab-1	38113	A	7-46	Original isolate
pdx-1	37803	A	2-47	Original isolate
pdx-1	44602p	a	2-46	see <u>thi-1</u> below
pro-3	44207	a	3-57	From Caltech via M. Mitchell; presumably reisolate (44207-P787-4a)
pyr-3	37301p	A	12-49	Presumably original isolate (FGSC 87)
pyr-3	37301p	a	3-50	From backcross to SY4a
pyr-4	36601	a	10-49	Probably original
rib-1	51602(t)	A	3-46	Original isolate
sc,leu-1;al	5801,33757; 15300(?)	?	5-46	Earliest derivative available
thi-1	56501	a	3-46	Presumably original isolate
thi-1	T(I;VII)17084 pdx-1(37803)	a	1-46	Earliest known
thi-1	T(I;VII)17084 pdx-1(44602p)	a	2-46	Earliest known
thi-2	9185	a	4-48	1st backcross of original 9185-1-3a, 9185-1-56A (strong growing culture)
thi-3	18558	A	1-46	Probably original
thi-4	85902	A	7-46	Presumably original isolate
thi-5	50005	a	11-46	Presumably original strain from Caltech (50005-5231-7a)
thr-2	35423	a	8-52	From Caltech collection via E. Adelberg, probably original
trp-2	45302	a	11-46	Presumably original strain
trp-2	47317	a	11-46	Probably original strain
trp-2	75001	A	11-46	Possibly original isolate
trp-2	75001	a	2-46	Possibly original isolate
trp-2	75002	a	11-46	Possibly original isolate
un-4	66204	?	3-61	From Caltech, presumably reisolate of original 66204-R-3
val	33050	A	11-46	Presumably original strain

Note: R used in middle of a Caltech number was used to designate reisolate from backcross to wildtype

Group II

Brookhaven mutants using the prefix B. Produced by Val Woodward

Part 1: Original mutants or closest to original mutants available. All loci are represented in the current FGSC collection as reisolates from crosses.

Locus	Allele	MT	Date Lyophi- lized	Notes
am	B501	A	10-55	Presumably original
