FOREWORD

I am a horticulturist that has always been interested in the connection people have with plants, so much so that I have been studying the topic for over 25 years. Human issues in horticulture (HIH) is concerned with the interface between the user of horticultural crops and services and the horticulture industry and professionals (Relf, 1995). It looks at the influences of plants on people in all aspects of their lives with topics such as enabling or accessible gardens, children's and school gardening, healing landscapes, garden/plant therapy, horticultural therapy, plus economic and marketing issues. Other terms used to refer to this broad concept include socio-horticulture, people-plant interaction, and human dimensions in horticulture. This bibliography of books, pamphlets, curriculum materials, dissertations and theses, media, and journals, periodicals, and serials is the most comprehensive listing on the topic.

Look in any introductory horticulture textbook and you will find *horticulture* defined as the science and art of growing fruits, vegetables, flowers or ornamental plants. Thus, horticulture research and training is commonly seen as a science and technology focused on the role of horticulture in crop production. Charlie Lewis, one of the pioneers in defining a broader definition of horticulture in terms of human well-being, would often tell a wonderful story from early in his distinguished career at the Morton Arboretum that introduced him to these human values. In 1962, Charlie volunteered to assist the New York City Housing Authority in initiating a garden contest for its residents (which still continues). As a judge, he talked with the many gardeners that created beauty in areas where automobiles and buildings were regularly vandalized. What was revealed to him was "a new world, one in which the subtle human benefits of gardening perhaps outweighed the esthetic and material value of the flowers and vegetables produced" (Lewis, 1996, p.56).

Diana Farmer has done an excellent job in preparing a comprehensive bibliography of a rather broad construct. The considerable number of citations on horticultural therapy found throughout the book is a significant contribution to a profession that is evolving. However, what I think is most

significant, and not found anywhere else, are the citations on gardening. These are not just 'how-to garden' references, but are garden references with a human focus. A few examples are *Gardening without sight* (Fleet, 1989) and *Prison garden book* (Flinn, 1986). Jointly with these gardening references, are references on associated topics such as universal design, accessibility, human perception and environment and behavior.

From a pioneer of human issues in horticulture, thank you Diana for completing this monumental project (and as an academic, nothing really counts until it is published).

AUTHOR'S NOTE

The idea for this bibliography began in 1996. A colleague (Elizabeth Deger) and I collaborated on writing a grant for funds to broaden a monograph collection that would better support the degree in horticultural therapy offered at Kansas State University. We developed a list of possible titles, compared it with titles currently in the Kansas State University Library's collections and made a prioritized list of the titles to purchase. Titles continued to be added to this list after the grant was over. In 2004, bibliographers were asked to analyze the Library's collections, especially collections that supported specific university programs. The goal was to determine the strengths/weaknesses of that collection in comparison to other educational institutions with similar programs. At that time the existing list of titles was compared to titles in the online library catalogs of Texas A&M University, Rutgers University and Virginia Tech because those institutions had strong programs in horticultural therapy. The title list was converted to a database at that time. The database included the title information as well as information on which institution(s) had a title in their collections. Additional titles were found as these catalogs were searched and these were added to the database. About this time Kansas State University obtained RefWorks, an online bibliographic tool. All titles listed in the database were added to RefWorks and additional information for each title such as subject descriptors was added. RefWorks allowed for easier de-duplication, formatting for various bibliographic styles and also allowed the bibliography to be shared with faculty and students.

The subject of horticultural therapy goes beyond just gardening/horticulture and the effect of that activity on the physical, emotional, mental, and social well-being of an individual. Texts on human physiology, cognition, philosophy, psychology, etc. were included in the bibliography that provided an improved understanding of why horticulture/gardening is an effective therapy. Hopefully the expanded coverage from academic theory to practical applications will enable

students and practitioners to broaden their skills, improve their understanding of why and how gardening can be an effective therapy and point to areas of further research.

Horticultural therapy is a helping profession. It utilizes gardening activities to initiate and achieve specific therapeutic goals for individuals. As the field has matured there has been more focus on the social and community benefits of horticulture/gardening on individuals and groups of people. The descriptive labels range from horticultural therapy to social and therapeutic horticulture to people-plant connection to human issues in horticulture. As the labels change, the focus broadens beyond the effects of gardening on an individual's physical, mental, or emotional health to include the effects upon a society and community.

INTRODUCTION

This bibliography of works about human issues in horticulture includes monographs, treatises, pamphlets and media published prior to and through 1999. It is not exhaustive nor does it include journal articles. Although the works listed are primarily in English, works in other languages are included. The compiler has not examined all items listed. The bibliography itself is divided into six chapters. Chapter 1 includes books over 50 pages in length. Chapter 2 includes pamphlets and brochures (items 50 or fewer pages in length). Chapter 3, Curriculum Materials, includes instructional and related or supportive material, including materials using advanced learning technology that is designed to strengthen the academic foundation of teaching gardening in grade levels K-12. Chapter 4 includes research reports, master's theses and doctoral dissertations written to fulfill the requirements for the attainment of a bachelor, master or doctorate degree at an educational institution. Chapter 5 includes media – sound recordings, films, slides, etc. The last bibliography section, Chapter 6, is a listing of journals, periodicals, newsletters and other serials whose coverage was primarily horticultural therapy or some aspect of the topic.

The initial list of titles was compiled from a search of the library catalogs of four institutions – Kansas State University, Rutgers University, Texas A&M University, and VirginiaTech. At the time this bibliography was started, these institutions offered either a degree in horticultural therapy or an emphasis in horticultural therapy in their horticulture department. Titles held by the University of Washington, Seattle were added three years later at the request/suggestion of faculty in K-State's Department of Horticulture, Forestry and Recreational Resources. Changes and advances in technology led to an increase in the number of and access to online library catalogs. As a result, WorldCat and the library catalogs of other institutions have been used to identify the reports, theses and dissertations listed here. Throughout chapters 1-6, all works in the chapter

have been assigned unique codes for ease of cross reference or identification.

The intent of this work is to be as complete and accurate as possible for non-journal article literature for the period covered. This was not possible for Chapter 4, Theses and Dissertations. It has only been in the last 20 years that many institutions have included in their online library catalogs and sources such as WorldCat, the reports, theses and dissertations completed in fulfillment of attaining a degree. So this section is as complete as was possible at the time of the compilation. This is also true of Chapter 5, Media, especially in regard to the output of educational institutions and other organizations and associations engaged in the research or practice of the field.

TITLES MOST-COMMONLY HELD

This could be called ‘Core Titles’. The bibliography grew from an analysis of the collection at Kansas State University Libraries with collections at 4 other institutions (Rutgers University, Texas A&M University, Virginia Tech and University of Washington, Seattle) with programs in horticultural therapy or community gardening. By their very nature horticultural therapy and/or community gardening are interdisciplinary topics. So the ‘core’ list includes titles from other disciplines as well as titles specifically addressing horticultural therapy in all its aspects.

There are 2 lists below. The first list includes titles from the bibliography held by all 5 institutions. Since one of the 5 programs does not have a horticultural therapy program, the titles in List 1 does not include any titles dealing with horticultural therapy. It is List 2, where 4 of the 5 institutions checked had the titles in their collections, which includes titles devoted to horticultural therapy. Both lists are arranged alphabetically by the title. The Reference number (bolded) refers to the item number of the work within chapters 1-6..

INDEX

The following index of subject terms is based primarily on Library of Congress (LC) subject headings and in a few instances, keywords or phrases for which there was no equivalent LC subject heading. The numbers following each subject heading refer to a specific title in the main bibliography. If the number is preceded by a letter, that letter refers to the items in the following specific chapters. Items without a prefixing letter are from the Books chapter. The serial titles (magazines, journals and other continuations) are not included in this index as their contents do encompass many of the subjects listed below.

ABOUT THE AUTHOR

Diana Farmer is a librarian at Kansas State University. She has a Masters of Library Science. In 1991 she became a subject bibliographer for Agriculture, Engineering and the Sciences. As part of her responsibilities she worked with the Department of Horticulture (as it was named at that time) to develop a collection to support the Horticultural Therapy program. Although her responsibilities changed over the years, her relationship with the Department of Horticulture, Forestry and Recreational Resources continued as has her collection building responsibilities.

She became a member of the United States Agricultural Information Network (USAIN) in 1991. She has been active in the organization—serving as President, as a Delegate to the USAIN Executive Council, and chairing or serving on various committees.
