Information age

Kansas State University first introduced printing techniques as part of its curriculum in 1874. The Industrialist began publication the following year to provide students with hands-on printing and publishing experience and to share university news across the state. The Industrialist was printed until 1955.

In this 1941 photo, Edgar M. Amos, associate professor, helps students set type as part of the typography lab, where students used handwritten drafts to prepare news stories for printing. See page 16 to learn how K-State research and outreach continues to analyze new communication technologies.

Path to prosperity

Kansas State University is embarking on a plan to increase economic prosperity for people and businesses in Kansas in four key areas.

Food and agriculture systems innovation
K-State will work with producers to transform, sustain and adapt food and agriculture systems to create jobs and bring investments to Kansas.

Digital agriculture and advanced analytics
K-State will lead the global food system through methods based on data, analytics and decision-making.

Biosecurity and biodefense
K-State will become the foremost U.S. resource for private-public research collaboration on pathogens of global significance, biosecurity and biodefense.

K-State 105: Every town to gown
K-State will provide businesses and communities with access to university innovation, talent and training.
