**FIELD SYMPTOM-RESPONSE
OF SORGHUM HYBRIDS
INFECTED BY MAIZE DWARF
MOSAIC VIRUS**

D.L. Seifers and K.D. Kofoid*

Sorghum (*Sorghum bicolor* (L.) Moench) that is infected by maize dwarf mosaic virus (MDMV) expresses different symptoms depending on plant genotype and temperature. Infection causes a yellow to dark green pattern (mosaic), and a necrotic reaction (red-leaf) develops on certain genotypes when the temperature drops below approximately 21 °C (69°F). Hybrids expressing the red-leaf symptom show a greater reduction in yield. Immunity to MDMV is not present in commercially available hybrid sorghums.

Procedures

Studies were conducted at the Kansas State University Agricultural Research Center-Hays to determine symptom response of sorghum hybrids infected by MDMV under field conditions (2 years of testing). Sorghum seed was planted in 6.1 m rows. When at the two- to three-leaf stage, plants in half of each row were inoculated, and plants in the remaining half of the row served as healthy controls. Plants were inoculated with a Devilbiss EGA-502 spray gun attached to a 3.5 L (1 gal) inoculum reservoir. Compressor line pressure was maintained at 7.0 kg/cm² (100 lbs/h²). Symptom notes were recorded at biweekly intervals during the growing

season beginning 2 weeks after inoculation. Planting was delayed until late June to assure cool temperatures for induction of red-leaf necrosis.

Results

Field symptoms of hybrids are shown in Table 1. Symptoms of the sorghums to infection are given as M=mosaic reaction with no necrosis, NSp=necrotic spots (least severe RL reaction), NS=necrotic streaks often coalescing to form large irregularly shaped necrotic areas on the leaf, and RL=entire leaf necrotic (most severe necrotic reaction). Data so far indicate that sorghum hybrids having the M reaction suffer less yield loss than plants developing necrosis (RL types).

Acknowledgements

This research was funded partially by a grant from the Kansas Sorghum Commission. We thank Jeff Ackerman, Wayne Aschwege, and Clayton Seaman for their assistance in conducting this research.
