Foreword, Appendices

Abstract
It is with great pleasure that we present the 2017 Swine Industry Day Report of Progress. This report contains updates and summaries of applied and basic research conducted at Kansas State University during the past year. We hope that the information will be of benefit as we attempt to meet the needs of the Kansas swine industry.

Keywords
swine

Standard Abbreviations

ADG = average daily gain  Mcal = megacalorie(s)
ADF = acid detergent fiber  ME = metabolizable energy
ADFI = average daily feed intake  mEq = milliequivalent(s)
AI = artificial insemination  min = minute(s)
avg = average  mg = milligram(s)
bu = bushel  mL = cc (cubic centimeters)
BW = body weight  mm = millimeter(s)
cm = centimeter(s)  mo = month(s)
CP = crude protein  MUFA = monounsaturated fatty acid
CV = coefficient of variation  N = nitrogen
Cwt = 100 lb  NE = net energy
d = day(s)  NDF = neutral detergent fiber
DE = digestible energy  NFE = nitrogen-free extract
DM = dry matter  ng = nanogram(s), .001 Fg
DMI = dry matter intake  no. = number
F/G = feed efficiency  NRC = National Research Council
ft = foot(foot)  ppb = parts per billion
ft² = square foot(foot)  ppm = parts per million
g = gram(s)  psi = pounds per square inch
µg = microgram(s), .001 mg  PUFA = polyunsaturated fatty acid
gal = gallon(s)  SD = standard deviation
GE = gross energy  sec = second(s)
h = hour(s)  SE = standard error
HCW = hot carcass weight  SEM = standard error of the mean
in = inch(es)  SEW = segregated early weaning
IU = international unit(s)  SFA = saturated fatty acid
kg = kilogram(s)  UFA = unsaturated fatty acid
kcal = kilocalorie(s)  wk = week(s)
kWh = kilowatt hour(s)  wt = weight(s)
lb = pound(s)  yr = year(s)
K-State Vitamin and Trace Mineral Premixes

Diets listed in this report contain the following vitamin and trace mineral premixes unless otherwise specified.

- **Trace mineral premix:** Each pound of premix contains 10 g Mn, 33 g Fe, 33 g Zn, 5 g Cu, 90 mg I, and 90 mg Se.

- **Vitamin premix:** Each pound of premix contains 1,600,000 IU vitamin A, 400,000 IU vitamin D3, 8,000 mg vitamin E (dl-α-tocopherol acetate or 4,000 mg d-α-tocopherol acetate), 800 mg menadione, 1,500 mg riboflavin, 5,000 mg pantothenic acid, 15,000 mg niacin, and 7 mg vitamin B12.

- **Sow add pack:** Each pound of premix contains 100,000 mg choline, 40 mg biotin, 300 mg folic acid, 400 mg pyridoxine, 4,000 mg Vit E (dl-α-tocopherol acetate or 2,000 mg d-α-tocopherol acetate), 9,000 mg L-carnitine, and 36 mg Cr.

**Note**

Some of the research reported here was carried out under special U.S. Food and Drug Administration (FDA) clearances that apply only to investigational uses at approved research institutions. Materials that require FDA clearances may be used in the field only at the levels and for the use specified in that clearance.
Biological Variability and Chances of Error

Variability among individual animals in an experiment leads to problems in interpreting the results. Animals on treatment X may have higher average daily gains than those on treatment Y, but variability within treatments may indicate that the differences in production between X and Y were not the result of the treatment alone. Statistical analysis allows us to calculate the probability that such differences are from treatment rather than from chance.

In some of the articles herein, you will see the notation “$P < 0.05.$” That means the probability of the differences resulting from chance is less than 5%. If two averages are said to be “significantly different,” the probability is less than 5% that the difference is from chance, or the probability exceeds 95% that the difference resulted from the treatments applied.

Some papers report correlations or measures of the relationship between traits. The relationship may be positive (both traits tend to get larger or smaller together) or negative (as one trait gets larger, the other gets smaller). A perfect correlation is one (+1 or -1). If there is no relationship, the correlation is zero.

In other papers, you may see an average given as 2.5 ± 0.1. The 2.5 is the average; 0.1 is the “standard error.” The standard error is calculated to be 68% certain that the real average (with unlimited number of animals) would fall within one standard error from the average, in this case between 2.4 and 2.6.

Using many animals per treatment, replicating treatments several times, and using uniform animals increase the probability of finding real differences when they exist. Statistical analysis allows more valid interpretation of the results, regardless of the number of animals. In all the research reported herein, statistical analyses are included to increase the confidence you can place in the results.
Index of Key Words

added trace minerals  feed-grade antibiotic
alternative  finisher
amino acid  finishing pig
amino acid ratios  fish meal
AminoGut  fish solubles
antibiotic  formaldehyde
growth performance  gestation
Bacillus subtilis  gilt
benzoic acid  glutamate
bone mineralization  glutamine
calcium (Ca)  growing pigs
clavamox  growing-finishing pigs
cold pelleting  growth performance
colostrum intake  hammermill
computerized feeder  HP 300
computerized feeder  lactation
creep feed  lactation crate size
creep feed  linear programming
creep feed  low birth weight pigs
choline  Luminex
chlortetracycline (CTC)  lysine
chromium propionate  lysine requirement
cold pelleting  maternal growth
colostrum intake  medium chain fatty acid (MCFA)
cold pelleting  mitigation
computerized feeder  mixed models
computerized feeder  modeling
computerized feeder  molecular diagnostics
computerized feeder  monosodium glutamate
computerized feeder  mycotoxin
computerized feeder  net energy
computerized feeder  neutral detergent fiber
computerized feeder  nursery
computerized feeder  nursery pig
computerized feeder  particle size
computerized feeder  pelleting
computerized feeder  phase-feeding
computerized feeder  phosphorus (P)
computerized feeder  phytase
computerized feeder  phytogenics
computerized feeder  polymerase chain reaction (PCR)
computerized feeder  Porcine circo virus (PCV)
computerized feeder  PCV2
computerized feeder  PCV3
computerized feeder  Porcine Epidemic Diarrhea Virus (PEDV)
computerized feeder  Porcine reproductive and respiratory syndrome virus (PRRS)
computerized feeder  post-weaning diarrhea (PWD)
computerized feeder  preservatives
computerized feeder  probiotic
computerized feeder  ractopamine HCl
computerized feeder  regression equations
computerized feeder  reproduction
computerized feeder  salt
computerized feeder  screenings
computerized feeder  sodium
computerized feeder  sodium metabisulfite
computerized feeder  sow
computerized feeder  soybean meal
computerized feeder  split suckling
computerized feeder  supplementation
computerized feeder  swine
computerized feeder  thermal processing
computerized feeder  tip speed
computerized feeder  tri-basic copper chloride
computerized feeder  tryptophan
computerized feeder  vaccine
computerized feeder  vomitoxin
computerized feeder  weanling pig
computerized feeder  Yucca schidigera
computerized feeder  zinc (Zn)
Acknowledgments

Appreciation is expressed to these organizations for assisting with swine research at Kansas State University.

We especially appreciate the assistance and dedication of Kansas State University employees Duane Baughman, Frank Jennings, Mark Nelson, Chance Fiehler, Caitlin Evans, Ashton Yoder, and Theresa Rathbun.

Appreciation is also expressed to: Allan Morris, Heath Houselog, Marty Heintz, Craig Steck, Whitney Adler, and Bob Taubert, New Horizon Farms, Pipestone, MN, for their dedicated support.

Appreciation is expressed to Triumph Foods LLC, St. Joseph, MO, and Jerry Lehenbauer, Brad Knadler, Dr. Emily Arkfeld, and Dr. Barry Wisemann for technical assistance.

The Livestock and Meat Industry Council, Inc.

The Livestock and Meat Industry Council, Inc. (LMIC) is a nonprofit charitable organization supporting animal agriculture research, teaching, and education. This is accomplished through the support of individuals and businesses that make LMIC a part of their charitable giving.

Tax-deductible contributions can be made through gifts of cash, appreciated securities, real estate, life insurance, charitable remainder trusts, and bequests as well as many other forms of planned giving. LMIC can also receive gifts of livestock, machinery, or equipment. These types of gifts, known as gifts-in-kind, allow the donor to be eligible for a tax benefit based on the appraised value of the gift.

Since its inception in 1970, LMIC has provided student scholarships, research assistance, capital improvements, land, buildings, and equipment to support students, faculty, and the industry of animal agriculture. If you would like to be a part of this mission or would like additional information, please contact the Livestock and Meat Industry Council/Animal Sciences and Industry, Weber Hall, Manhattan, Kansas 66506 or call 785-532-1227.
