Foreword

It is with great pleasure that we present the 2024 Swine Industry Day Report of Progress. This report contains updates and summaries of swine-related research conducted at Kansas State University during the past year. We hope that the information will be of benefit as we attempt to meet the needs of the Kansas swine industry.

2024 Swine Day Report of Progress Editors

Bob Goodband
Jordan Gebhardt
Mike Tokach
Joel DeRouchey
Jason Woodworth
Katelyn Gaffield

Standard Abbreviations

AA = amino acids	lb = pound(s)
ADF = acid detergent fiber	Mcal = megacalorie(s)
ADFI = average daily feed intake	ME = metabolizable energy
ADG = average daily gain	mEq = milliequivalent(s)
AI = artificial insemination	min = minute(s)
avg = average	mg = milligram(s)
bu = bushel	mL = cc (cubic centimeters)
BW = body weight	mm = millimeter(s)
cm = centimeter(s)	mo = month(s)
CP = crude protein	MUFA = monounsaturated fatty acid
CV = coefficient of variation	N = nitrogen
cwt = 100 lb	NDF = neutral detergent fiber
d = day(s)	NE = net energy
DDGS = dried distillers grains with solubles	NFE = nitrogen-free extract
DE = digestible energy	ng = nanogram(s), .001 Fg
DM = dry matter	no. = number
DMI = dry matter intake	NRC = National Research Council
F/G = feed efficiency	ppb = parts per billion
ft = foot (feet)	ppm = parts per million
ft ² = square foot(feet)	psi = pounds per square inch
g = gram(s)	PUFA = polyunsaturated fatty acid
µg = microgram(s), .001 mg	s = second(s)
gal = gallon(s)	SD = standard deviation
GE = gross energy	SE = standard error
h = hour(s)	SEM = standard error of the mean
HCW = hot carcass weight	SEW = segregated early weaning
in. = inch(es)	SFA = saturated fatty acid
IU = international unit(s)	SID = standardized ileal digestible
kcal = kilocalorie(s)	UFA = unsaturated fatty acid
kg = kilogram(s)	wk = week(s)
kWh = kilowatt hour(s)	wt = weight(s)
	yr = year(s)

K-State Vitamin and Trace Mineral Premixes

Diets listed in this report contain the following vitamin and trace mineral premixes unless otherwise specified.

- ***Trace mineral premix:*** Each pound of premix contains 10 g Mn, 33 g Fe, 33 g Zn, 5 g Cu, 90 mg I, and 90 mg Se.
- ***Vitamin premix:*** Each pound of premix contains 750,000 IU vitamin A, 300,000 IU vitamin D₃, 8,000 mg vitamin E (dl-alpha-tocopherol acetate or 4,000 mg d-alpha-tocopherol acetate), 600 mg menadione, 1,500 mg riboflavin, 5,000 mg pantothenic acid, 9,000 mg niacin, and 6 mg vitamin B₁₂.
- ***Sow add pack:*** Each pound of premix contains 750,000 IU vitamin A, 100,000 mg choline, 40 mg biotin, 400 mg folic acid, 180 mg pyridoxine, 4,000 mg vitamin E (dl-alpha-tocopherol acetate or 2,000 mg d-alpha-tocopherol acetate), 9,000 mg L-carnitine, and 36 mg Cr.

Note

Some of the research reported here was carried out under special U.S. Food and Drug Administration (FDA) clearances that apply only to investigational uses at approved research institutions. Materials that require FDA clearances may be used in the field only at the levels and for the use specified in that clearance.

Biological Variability and Chances of Error

Variability among individual animals in an experiment leads to problems in interpreting the results. Animals on treatment X may have higher average daily gains than those on treatment Y, but variability within treatments may indicate that the differences in production between X and Y were not the result of the treatment alone. Statistical analysis allows us to calculate the probability that such differences are from treatment rather than from chance.

In some of the articles herein, you will see the notation “ $P < 0.05$.” That means the probability of the differences resulting from chance is less than 5%. If two averages are said to be “significantly different,” the probability is less than 5% that the difference is from chance, or the probability exceeds 95% that the difference resulted from the treatments applied.

Some papers report correlations or measures of the relationship between traits. The relationship may be positive (both traits tend to get larger or smaller together) or negative (as one trait gets larger, the other gets smaller). A perfect correlation is one (+1 or -1). If there is no relationship, the correlation is zero.

In other papers, you may see an average given as 2.5 ± 0.1 . The 2.5 is the average; 0.1 is the “standard error.” The standard error is calculated to be 68% certain that the real average (with unlimited number of animals) would fall within one standard error from the average, in this case between 2.4 and 2.6.

Using many animals per treatment, replicating treatments several times, and using uniform animals increase the probability of finding real differences when they exist. Statistical analysis allows more valid interpretation of the results, regardless of the number of animals. In all the research reported herein, statistical analyses are included to increase the confidence you can place in the results.

Acknowledgments

Appreciation is expressed to these organizations for assisting with swine research at Kansas State University.

Abilene Animal Hospital, Abilene, KS
 Agroceres, Rio Claro, Brazil
 Ajinomoto Heartland LLC, Chicago, IL
 Animal Nutrition Association of Canada
 Animine SAS, Annecy, France
 Brennenman Pork, Washington, IA

The Livestock and Meat Industry Council, Inc

The Livestock and Meat Industry Council, Inc (LMIC) is a non-profit charitable organization supporting animal agriculture research, teaching, and education. This is accomplished through the support of individuals and businesses that make LMIC a part of their charitable giving.

Tax-deductible contributions can be made through gifts of cash, appreciated securities, real estate, life insurance, charitable remainder trusts, and bequests as well as many other forms of planned giving. LMIC can also receive gifts of livestock, machinery, or equipment. These types of gifts, known as gifts-in-kind, allow the donor to be eligible for a tax benefit based on the appraised value of the gift.

Since its inception in 1970, LMIC has provided student scholarships, research assistance, capital improvements, land, buildings, and equipment to support students, faculty, and the industry of animal agriculture. If you would like to be a part of this mission or would like additional information, please contact the Livestock and Meat Industry Council/Animal Sciences and Industry, 232 Weber Hall, Manhattan, Kansas 66506 or call 785-532-7624.

LMIC Board Members

Gene Barrett	Mark Gratny	Bill Miller
Tracy Brunner	Kirk Gray	Greg Reno
Doug Claassen	Kim Harms	Jerry Riemann
Larry Corah	Justin Janssen	Hal Sankey
Doug Deets	Jerry Kuckelman	Randall Spare
Todd Domer	David Latta	John Sticka
Barb Downey	Debbie Lyons-Blythe	Tom Toll
Jeff George	Steve Mangan	Scott VanderHamm
Chelsea Good	Mary McCurry	Mark Young

Royal Board Members

Dell Allen	Bernie Hansen	Lisa Moser
Kyle Bauer	Frank Harper	Andrew Murphy
Jerry Bohn	Roy Henry	Stanton O'Neil
David Clawson	Patsy Houghton	Tom Perrier
Galen Fink	Steven Hunt	Rich Porter
Randy Fisher	Virgil Huseman	Harland Priddle
Mark Gardiner	Larry Jones	Lee Reeve
Craig Good	Pat Koons	Ken Stielow
Lyle Gray	Kelly Lechtenberg	Mikel Stout
Ken Grecian	Jan Lyons	Kathleen Strunk
Sam Hands	Gina Miller	Warren Weibert
